SwagArch GNU/Linux 2017.06

By Roy Schestowitz
Created 07/08/2017 - 8:11am

SwagArch GNU/Linux is a relatively new addition to the DistroWatch database. The distribution is based on Arch Linux and is developed for 64-bit x86 computers exclusively. Like its parent, SwagArch is a rolling release distribution. Unlike its parent, SwagArch’s installation media ships with a live desktop environment and a graphical system installer which should make it a lot easier to set up the distribution quickly.

I downloaded the distribution’s sole edition which is available as a 1.1GB download. Booting from the downloaded image launches the Xfce desktop environment. The desktop is arranged with a panel at the top of the screen which holds an application menu and system tray. At the bottom of the screen is a panel containing quick-launch buttons and icons representing open windows. Once the Xfce desktop finishes loading, the distribution automatically launches the
Calamares system installer to assist us in setting up our new copy of SwagArch.
