PCLinuxOS has always remained a reliable OS to work and, as the update included Lomanager, the distro's method to update LibreOffice, I couldn't delay.

Although the update was fast, LibreOffice was taking a considerable time to finish. Yes, I must thank my ISP for that: my connection has been unstable for over a week, with a speed sometimes down to a crawl.

Speed was abnormally slow. I became a bit restless.

That was when I saw the Steam icon on my desktop...the round icon that had not been clicked on since October 2015.
