Automatic LAMP (Linux, Apache, MySQL and PHP) In about 15 minutes, the time it takes to install Ubuntu Edgy Server Edition, you can have a LAMP server up and ready to go. This feature, exclusive to Ubuntu Server Edition, is available at the time of installation.

The LAMP option saves the trouble of installing and integrating each of the four separate LAMP components, a process which can take hours and requires someone who is skilled in the installation and configuration of the individual applications. You get increased security, reduced time to install, and reduced risk of misconfiguration, all of which results in a lower cost of ownership.

Ubuntu LAMP server Install the following Versions:

Ubuntu Edgy Eft 6.10

Apache 2.0.55

Mysql 5.0.24a

PHP 5.1.6

First you need to download server version of Ubuntu version from here after that you create a CD and start booting with the CD Once it starts booting you should see the following screen in this you need to select second option ?Install to the Hard disk Option? and press enter
