- [Moving to XOrg 1.20](#) [2]

- [Let?s show some love to 14.2](#) [3]

With all the excitement going on about the disruptive changes in Slackware-current (migration to the new C++ ABI caused all of Slackware to be recompiled, and then the upgrade of openssl to 1.1 caused many packages to be recompiled again), I had to spend all of my time and CPU power to keep up with the changes and fix my packages for -current.

That meant, less attention to the package updates for Slackware 14.2. I realize I left the users of our stable release somewhat in the cold.

I am going to do something about that. During the next weeks I will try to bridge the gap that had been expanding for package versions in my own repository, between 14.2 and -current.
