A Look At DragonFlyBSD's Kernel Tuning Performance On The AMD Threadripper 2990WX

By Roy Schestowitz
Created 31/08/2018 - 7:31pm

Last week I posted some initial tests and benchmarks of DragonFlyBSD/FreeBSD on the AMD Threadripper 2990WX. While that went well and the BSDs scale with this 32-core / 64-thread processor better than Windows, lead DragonFly developer Matthew Dillon had picked up a 2990WX system and has been tuning the kernel ever since. Here are some benchmarks looking at some of his recent optimizations.

Hours after that BSD Threadripper testing ended last week, Matthew Dillon landed some more performance tuning/optimizations to benefit the Threadripper 2990WX design. Here are some benchmarks of that original 2990WX support on DragonFlyBSD 5.3-DEVELOPMENT compared to the later daily snapshot.
