- [15 Best Security Tools You Should Have on Linux](#) [2]

When talking about security many terms come to mind. Hacking, viruses, malware, data loss, etc. Here is our list of the 15 security tools you should be using on your Linux system.

- [Researchers ?break? Edge with zero-day remote code exploit](#) [3]

Proof-of-concept shows researchers opening the Chrome landing page from Edge via Firefox Security researchers have teased a zero-day exploit for Microsoft's Edge browser that can allow a malicious actor to run commands on a user's machine.

Two vulnerabilities, discovered by exploit developer Yushi Laing with help from Alexander Kochkov, could allow an anonymous user execute code remotely, and potentially seize control of a user's device.
