Intrinsyc's Android 8.0 driven Open-Q 670 HDK mobile development kit for the octa-core Snapdragon 670 SoC features a 5.65-inch touchscreen, 6GB LPDDR4, 6GB eMMC, WiFi, BT, GPS, NFC, and optional camera and sensor boards.

The 170 x 170mm, Mini-ITX form-factor Open-Q 670 HDK is one of Intrinsyc's Android mobile "open frame" kits with a smartphone like touchscreen. Most recently, these include the Open-Q 845, which taps the high-end, AI-enhanced Snapdragon 845. The similarly Android 8.0 powered Open-Q 670 HDK is built around Qualcomm's somewhat less powerful, but still octa-core Snapdragon 670, which was announced in August.
