Hangzhou C-SKY has launched a ?C-SKY Linux Development Board? for \$5.60 and up, featuring a RISC-V derived, 574MHz C-SKY GX6605S CK610M SoC, 64MB DDR2, an HDMI port, and 2x USB 2.0 ports.

Last month, Hangzhou C-SKY Microsystems Co. announced Linux 4.20~5.0 kernel support for its new RISC-V based C-SKY CK810 SoC design. Now, Hangzhou C-SKY has launched a development board that runs Linux on a similar CK610M SoC. The C-SKY Linux Development Board sells for 39-40 Yuan (\$5.60 to \$7.05) on Taobao and \$19.50 to \$21.50 on AliExpress.
