I don't want them to turn off my websites. And this is not any kind of civil disobedience, which would involve breaking a law. I'm just uploading my files to the Internet and trying out some technologies to facilitate this with the lowest demand on my webserver. If hosting companies apply some kind of blanket filter against .torrent files, that will seriously limit our ability to share media and content. It is completely unacceptable for web servers to do this kind of unmonitored regulation and threatening. What if I had been on vacation, couldn't respond, and they shut down my site in a week?

I want this on a t-shirt:

Bit Torrent doesn't pirate movies, people do.
