The VentureBeat report includes a long list of developer features included in this release, as well as all the security fixes found by external researchers. Chrome 73 implements a total of 60 security fixes.

- [Chrome 73 Released With HDCP Policy Check, Layout Jank API](#) [6]

Google has released version 73 of the Chrome/Chromium web-browser today.

The Chrome 73 web browser update features a Badging API for improving the experience around web app icons on a dock or home screen, namely for mobile devices. Another new API is the "Layout Jank API" for monitoring what DOM elements have changed their on-screen position during a user session. On the EME encrypted content front there is also now the ability to check particular HDCP policies for media playback and related work.
