- [Apache OpenOffice: The Free Open-Source Office Software Suite](#) [3]

Apache OpenOffice is available in diverse languages and works well on all common computer systems. It is primarily developed for Windows, Linux, and macOS with ports to other operating systems. The default file format for this software is the OpenDocument Format (ODF), an ISO/IEC standard. However, it can also read and write an extensive variety of other file formats, with specific attention to those from Microsoft Office (i.e. DOCX, XLS, PPT, and XML). The software can be downloaded and used for any purpose and yes, it's Free of Charge.

- [Get a Microsoft Office-style suite for free](#) [4]

Before we get into the details of how to download LibreOffice, we want to tell you about Capterra, which is a great website for comparing software solutions for home and business use. Even before they became a sponsor of Komando.com, we used them ALL. THE. TIME.

Check out how you can do side-by-side comparisons of spreadsheet programs in the screen shot below. Capterra has hundreds of software comparisons that include professional and user reviews.
