Microsoft debuts new Terminal app, next-gen Windows Subsystem for Linux for power users [4] [Ed: As tempted as I am to write articles to rebut the propaganda from Microsoft Build, I think any mention of it would simply amplify the marketing so I shall refrain from it. Quick comments instead. Microsoft will say "build" (to mean blobs with spying [5]). It'll say "share" (as in Shared Source). "Open" (as in "open core"). "Source" (as in "Inner Source"). But never ever use the F word, "freedom". We need to get back to Free software and speak about computer/computing freedom again.]

Windows Terminal is a new Linux-inspired command line app for Windows 10 [6] [Ed: The latest slant from Microsoft (trying hard to impose Vista 10 [7] on everyone) is that Windows is now "like Linux". Like. Same thing it did before to push/foist Windows Servers on everyone. That failed.]

Microsoft unveils Windows Terminal, a new command line app for Windows [9] [Ed: Microsoft has just 'innovated' the Terminal]
Microsoft is going to ship a full Linux kernel in Windows 10 [10] [Ed: Linux is becoming a mere component in proprietary operating systems with NSA back doors. Microsoft does not "Love Linux". It envelopes it.]

Windows Subsystem for Linux 2 is faster, supports more apps [11] [Ed: Microsoft will do anything, including UEFI barriers, to ensure people never boot GNU/Linux and instead run its software as clients under Vista 10]

Ubuntu Linux Is Now Supported on Microsoft's Windows Subsystem for Linux (WSL) 2 [12] [Ed: This is not Linux, this is Windows. Microsoft is calling Windows "Linux". Moreover, in WSL the compatibility layers are proprietary software. It is a one-way relationships.]

Microsoft Put a Real Linux Kernel Inside Windows 10 [13] [Ed: OK, when does Microsoft open-source all of Windows and let us put the whole thing inside GNU/Linux free of charge? No? Nothing?]

Windows 10 will soon ship with a full, open source, GPLed Linux kernel [14] [Ed: Microsoft takes EEE another step further. It has done things like these for decades. It already calls Windows "Linux" -- a confusion which serves the company's agenda.]
