Hot off the release of Wine 4.8, Wine-Staging 4.8 has already been released with its hundreds of patches re-based atop this latest upstream Wine code for handling Windows games/applications on Linux and other operating systems.

Wine-Staging has continued seeing a nice flow of its patches accepted upstream, which alleviates the maintenance burden for the staging folks, but hundreds of patches remain. Fortunately, the number of new patches being added to Wine-Staging is generally less than the amount of patches being upstreamed each bi-weekly release cycle.
