This is a bugfix release for 0.11.3, mostly fixing minor bugs, improving documentation and fixing various build issues. In terms of usability, users should be aware that there are still a large number of known open issues in particular with respect to ease of use, but also some critical privacy issues especially for mobile users. Also, the nascent network is tiny (about 200 peers) and thus unlikely to provide good anonymity or extensive amounts of interesting information. As a result, the 0.11.4 release is still only suitable for early adopters with some reasonable pain tolerance.
