For the latest Cast to TV v9, the extension settings were redesigned, and there are some new options. The most important change is in my opinion, the addition of Chromecast subtitle settings - you can now change the subtitle font family, style, size, color, outline or background color.

The new version ships with an easier way of installing the required npm modules - a button to install the modules was added to the Modules tab.

Yet another new option allows hiding the remote label (the text shown on the top bar for the Chromecast remote when

casting), a useful addition since the text was quite long and it wasn't showing any useful information.
