KDE Plasma 5.16 is a major release that introduces numerous new features and improvements, across many of the built-in apps but also under the hood to make your KDE Plasma experience better, more stable, and more enjoyable. One of the highlights of KDE Plasma 5.16 is the completely revamped notifications system.

It supports a Do Not Disturb mode, richer notifications for file transfers, a more intelligent history with grouping, the ability to display notifications in full-screen applications, and lots of configuration options for users in a revamped and more usable System Settings page.
