Submitted by Rianne Schestowitz on Friday 31st of May 2019 10:07:51 PM Filed under [OS](#) [1] [SUSE](#) [2]

Launched on July 26, 2017, OpenSUSE Leap 42.3 was based on the SUSE Linux Enterprise (SLE) 12 Service Pack (SP) 3 operating system and it was powered by the long-term supported Linux 4.4 kernel series.

openSUSE Leap 42.3 was initially supposed to be supported until January 2019, but the openSUSE Project decided to give users six more months to upgrade to the latest openSUSE Leap 15 operating system series.

Now that openSUSE Leap 15.1 is here as the latest and greatest openSUSE Leap release, it's time for openSUSE Leap 42.3 users to upgrade their installations, and they only have one month to do that, until June 30th, 2019.
