Canonical's Daniel van Vugt continues doing a lot of interesting performance investigations and optimizations around improving the experience of GNOME not only for Ubuntu but the upstream components. His latest focus has been on NVIDIA enhancements and now for the X.Org session there is a merge request pending to provide for a smoother experience.

This week Van Vugt opened up a pull request that provides a "significant improvement" to the frame-rate smoothness for NVIDIA's proprietary Linux graphics driver running on GNOME under the X.Org session (this MR doesn't affect the Wayland session).
