My roadmap is to review all actively maintained internet radio players. To date, I've covered odio, Shortwave, Radiotray-NG, PyRadio, and StreamTuner2. Only PyRadio is console based software.

It's only right and proper that I turn to another console based internet radio streamer. Like PyRadio, Curseradio offers a curses interface for browsing and playing an OPML directory of internet radio streams. It's also written in the Python programming language.
