There are security bugs found every day, but back doors are an actual conspiracy; yet corporate media sponsored by the conspirators likes to deflect all blame to those who find/exploit these back doors.]

A critical security flaw in VLC Media Player has recently been discovered by German cybersecurity watchdog CERT-Bund, who warns that a successful attack would allow for remote code execution.

The vulnerability exists in VLC Media Player version 3.0.7.1, according to the official CVE-2019-13615, which is the latest stable release of the application.
