- **PHP 7.4.0beta1 released!** [2]

  The PHP team is glad to announce the first beta release of PHP 7.4: PHP 7.4.0beta1. This continues the PHP 7.4 release cycle, the rough outline of which is specified in the PHP Wiki.

- **PHP 7.4 Reaches Feature Freeze, Beta 1 Released** [3]

  After already having gone through three alpha releases, PHP 7.4 has reached its feature freeze and branching. As a result, the first PHP 7.4 beta is now available that will follow by multiple betas and release candidates while hopefully being released by the end of November.

  PHP 7.4 brings SQLite3 Online Backup API support, support for TGA files within the GD library, the PHP FFI extension is now present for accessing C functions/variables/structures from PHP, preload functionality, performance improvements, hardening to the systemd PHP FPM service, PHP Hash is now integrated into PHP core, TLS 1.3 support for OpenSSL streams, and many fixes.

- **PHP 7.4.0beta1 Released, HypriotOS 1.11.0 Now Available, ALA Asks LinkedIn Learning to Change Terms of Service that Jeopardize Privacy Rights, Red Hat Announces RHEL 8.1 Beta and The Forbidden Arts Coming to Linux**[4]

  PHP 7.4.0beta1 has been released, marking the first beta of PHP 7.4. Go here to see the list of changes, and go here to download. Note that this is an early test version and not intended for use in production. The next release, Beta 2, is scheduled for August 8th.
