The Galaxy Note 10 has just broken cover and, just like its predecessors, it has something new for Samsung DeX users. To be fair, the convenience of being able to not just control your phone but access the ?DeXtop? from any Windows or Mac computer is a major step forward, but it may have fallen short of what fans of the platform have been expecting or even requesting for a few months now. Samsung DeX definitely has a lot of potential but Samsung may have missed the boat on that one this year.
