Today, after 4 years and 5 months of work, we are pleased to announce the release of the Xfce desktop 4.14, a new stable version that supersedes Xfce 4.12.

In this 4.14 cycle the main goal was to port all core components to Gtk3 (over Gtk2) and GDBus (over D-Bus GLib). Most components also received GObject Introspection support. Along the way we ended up polishing our user experience, introducing quite a few new features and improvements (read below) and fixings a boatload of bugs (read changelog).
