- **openSUSE News: New 4.0.2 Version of Uyuni is Released** [2]

  Contributors of Uyuni Project have released a new version of Uyuni 4.0.2, which is an open-source infrastructure management solution tailored for software-defined infrastructure.

  Uyuni, a fork of the Spacewalk project, modernizing Spacewalk with SaltStack, provides more operating systems support and better scalability capabilities. Uyuni is now the upstream for SUSE Manager.

  With this release, Uyuni provides powerful new features such as monitoring, content lifecycle management and virtual machine management.

- **openSUSE Tumbleweed ? Review of the weeks 2019/31 & 32** [3]

  As you certainly know, there are more snapshots tested than we release in the end. In the last two weeks, for example, we tested 9 snapshots. Of those, only 4 made it to the mirrors and to you ? the users. During the last two weeks, these were snapshots 0726, 0730, 0805 and 0806.

- **Communities in the distrowatch.org top 20** [4]

  Only well-funded corporate sponsored Linux distributions (Fedora, Ubuntu, OpenSUSE) have all categories checked. That doesn?t mean that anyone is getting paid. I believe this means that employees are probably the chief contributors and that means there are more people putting in resources to help.

  Some distributions are ?Pat?s distribution?. Pat?s group owns it and Pat doesn?t want a

steering committee or any other say in how the distro works. Though contributions by means of bug reports may be accepted.

A few distributions ?outsource? resources to other distributions. Elementary allows Stack Exchange to provide their forum. Parrot Linux refers users to the Debian wiki. Mint suggests that you put in bug reports with the upstream provider unless it is a specific Mint create application.

There are a few Linux distributions that leave me scratching my head. How is this in the top 20 distros on distrowatch? There?s nothing here and the forum, if there is one, is nearly empty. Who uses this?

Vagrant Boxes with openSUSE Tumbleweed ? Check it Out! [5]

As part of the SUSE Developer Engagement, we recently kicked off the activity to automatically produce and validate Vagrant boxes for the openSUSE Tumbleweed distribution. The creation of Vagrant boxes for SUSE Linux Enterprise Server is currently work in progress. We will update you as soon as they are available for consumption.
But for now, we are happy to announce that the infrastructure to automatically build, version and validate Vagrant box images is ready to use ? and we are already producing Vagrant boxes for libvirt and Virtualbox ? for openSUSE Tumbleweed.
