One of the highly-desirable features of Linux ? a primary reason that developers prefer it to other operating systems ? is that it has been improved with a lot of free and open-source program. Many of the above platforms reflect this, making them powerful options for growing businesses looking into their software options as they scale. They?re also strong options for businesses for whom security is the highest priority, which is becoming a greater focus for organizations every day.

From personal to professional, Linux-based instant messaging programs can offer you flexibility, communication, and security. If you're running a Linux operating platform, make sure you look into this list of mainstream and alternative chat options for a reliable and robust messenger experience.
