During the annual Huawei developer conference, the company officially unveiled its custom HarmonyOS intended to create a unified ecosystem for potentially millions of users. Of course, this isn't going to be as simple as churning out improved and feature-enriched versions of its Kirin chipsets for smartphones and tablets, so Huawei intends on taking its time with what could be a viable Android competitor, even though it hasn't been marketed as such. Here we explain what is HarmonyOS, its unique feature set, and if it has the potential to somehow squirm its way in the duopoly iOS and Android have created for themselves.
