"Slackware is the longest active Linux distribution project, founded in 1993," writes TheBAFH (Slashdot reader #68,624).

"Today there are many Linux distributions available, but I've remained dedicated to this project as I believe it still holds an important place in the Linux ecosystem," writes Patrick J. Volkerding on a new Patreon page. He adds that Slackware's users "know that Slackware can be trusted not to constantly change the way things work, so that your investment in learning Slackware lasts longer than it would with a system that's a moving target... Your support is greatly appreciated, and will make it possible for me to continue to maintain this project."
