## [KDE Plasma: Unmount Multiple Partitions \(Safely Remove Drive\) at Once](#) [9]

### [Getting Around The Limits Of Memory To Accelerate Applications](#) [10]

Forget in-memory computing for the moment because it requires a complete re-architecting of applications and most of the time the underlying hardware, too. What we really want is something more like in-memory storage ? something that can be done immediately and provide performance benefits now.

This is what Formulus Black is doing with its Forsa in-memory storage, which is often mistakenly called in-memory computing. But that is not really what it is. Sort of.

### [Python Sweetness: Mitogen v0.2.8 released](#) [11]

Mitogen for Ansible v0.2.8 has been released. This version (finally) supports Ansible 2.8, comes with a supercharged replacement fetch module, and includes roughly 85% of what is needed to implement fully asynchronous connect.

As usual a huge slew of fixes are included. This is a bumper release, running to over 20k lines of diff. Get it while it's hot, and as always, bug reports are welcome!
