Today, Windows users hold off for as long as possible before "updating" their PCs. Chrome OS users, on the other hand, have their systems updated every six weeks without a hitch. And, I might add, these updates take a minute or two instead of an hour or two.

Chrome OS is also more secure than Windows. Windows security violations pop up every blessed month. Sure, Chrome OS has had security holes, but I can't think of one that's been significantly exploited.

Want a nightmare? Try migrating from an old Windows PC to a new one. Even if you're jumping from Windows 10 to Windows 10, there are no easy ways to do it. If you have a Microsoft account, rather than a local account, you must manually move your local files from third-party programs such as Photoshop

On Chrome OS, you log in to your new Chromebook and -- ta-da! -- you're back in business. No fuss, no muss.
