Many people in the technology world have heard, at least in passing, of the Linux distribution Gentoo. Gentoo is one of the most famous distributions to the point of becoming a joke; with its complexity and depth, installing Gentoo has been a daunting task for many.

Redcore is one of the latest distributions to attempt to bring the power of Gentoo to the everyday user.

I previously wrote an article in 2017 about Sabayon Linux, another popular Gentoo based system; but Redcore Linux holds its own and pulls its own weight.
