# Nikola - Static Site Generator for your webz

By *Rianne Schestowitz*

Created 28/08/2019 - 4:06pm

Submitted by Rianne Schestowitz on Wednesday 28th of August 2019 04:06:33 PM Filed under [Software](#) [1] [Web](#) [2]

The modern web is all about dynamic content. But in most cases, this is a technological illusion. A large number of website uses dynamically generated pages, i.e. stuff gets read from a database and rendered on the screen when requested, even for things that don't necessarily require any interaction. This takes resources, and might even be considered less secure, because bad or malformed instructions could theoretically generate something undesired.

The old Web was all about static content - HTML pages with links and images and not much else. Not bad, very light on the resources, and as secure as the Web server what does it. But then, not much interaction happens, and updating content can be tedious. What if there was something midway between the two worlds? That would be Nikola, a static site generator.
