LibreOffice is a really great free software project which provides its product in all formats possible, whether it is DEB or RPM, Snap, Flatpak, or even AppImage. If you don't know, AppImage is just like DMG on MacOS, it's application in single file format just click to run it. However, if you see closer, LibreOffice AppImage looks good on elementary OS 5.0. That's why it's very interesting to use on elementary OS. In this article I just want to report screenshots and my short comments about it. I hope you are interested to run LibreOffice AppImage version on elementary OS too. Enjoy!

If you do not have office suite on elementary OS yet, I recommend you to use LibreOffice AppImage. It runs instantly, unlike Snap or Flatpak version, without dependencies installation. You can run it by double-click on file manager. It works, and it looks so elementary fashioned.
