Great news this weekend for APU fans out there ? while the AMD Navi GPUs and Ryzen 3rd generation chips are currently taking over the computing world, it doesn't mean that the company has forgotten about its integrated graphics users.

In a recent report by Tom's Hardware, it looks like AMD's next generation APU (Accelerated Processing Unit) might come with LPDDR4X-4266 memory support. If true, this means that AMD Renoir will have a higher maximum data rate than AMD Picasso.
