The world's first modular, portable gaming console with a GNU/LINUX embedded operating system, the GameShell Kit allows you to connect to your TV to play all of your favorite old games from Atair, GB, GBA, NES, NAME, MD, PS1 and other consoles. But it doesn't end there. GameShell also supports programming languages like preset C, Python, Lua, and LISP, so not only can you modify your childhood favorites, but you can build your own games. TechCrunch calls Gameshell "totally unique" and "entirely refreshing when it comes to gaming on the go."
