The snapshots brought an update of KDE Plasma and Applications along with an update for the input framework ibus, two PostgreSQL versions and the command line package manager zypper.

KDE Applications 19.08.1 improvements to Kontact, Dolphin, Kdenlive, Konsole, Step, and more arrived in snapshot 20190909. Several regressions in Konsole's tab handling were fixed and Dolphin again starts correctly when in split-view mode. The updated of the anti-virus package clamav 0.101.4 address two Common Vulnerabilities and Exposures. The GNOME web browser package epiphany 3.32.5 fixed a memory corruption and broken web process extension connection when using WebKit trunk. An update of links 2.20.1 brought stability improvements and also addressed a bug when connected with tor would send real dns requests outside the tor network when the displayed page contains link elements with rel=dns-prefetch. The Plasma desktop received a minor update to 5.16.5 and fixed KWayland-integration builds with recent frameworks and Qt 5.13. Some notifications were changed in the new minor version and the some functionality was improved for current weather conditions. The qrencode 4.0.2 package improved support for cmake. The snapshot was trending at a rating of 84, according to the Tumbleweed snapshot reviewer.
