Released three months after the PulseAudio 12 series, PulseAudio 13 is here with support for Dolby TrueHD and DTS-HD Master Audio, support for the SteelSeries Arctis 5 USB headset, improved initial card profile selection for ALSA cards, as well as S/PDIF improvements for CMEDIA USB2.0 High-Speed True HD Audio.

The PulseAudio 13 series also adds several new module arguments, including "max_latency_msec" for module-loopback, "stream_name" for module-rtp-send, and "avoid_resampling" for module-udev-detect and module-alsa-card, and no longer uses persistent Bluetooth card profile choices by default, recommending users to use A2DP by default.
