Police Stories from Mighty Morgan and HypeTrain Digital is officially out now and after a very short delay the Linux version has also been released too.

A slower, more tactical top-down shooter that isn't all about going in loud? Certainly sounds interesting and it does look good. It released on the 19th with the Linux support appearing a day later. Early reports on it are good, with nearly 200 user reviews on Steam giving it a "Very Positive" rating overall so we might be onto a winner here.
