- [5 Popular Free and Open Source Accounting Software](#) [2]

- [5 Best TrueCrypt Alternatives - Open source encryption apps](#) [3]

If you want to protect your data from prying eyes, then you need to encrypt it. Previously many of us relied on Truecrypt to do this, however, as the popular encryption app was mysteriously discontinued, we have created this article to give you five alternatives to TrueCrypt.

If you are serious about security, then you will do this yourself rather than using a third-party to do it for you. This is what is meant by end-to-end encryption (e2ee).

But even if you are using e2ee, how do you know that the software is not doing something untoward? Such as secretly sending your encryption keys back to its developers, or creating a backdoor in the encryption.

The only guarantee we can have against this is the use of open-source code. Only if a program can be freely examined to ensure it does what it is supposed to (and only what it is supposed to) can we place a reasonable amount of confidence in it.

- [Shotcut 19.09.14](#) [4]

Shotcut is a free, open source, cross-platform video editor for Windows, Mac and Linux.

Major features include support for a wide range of formats; no import required meaning native timeline editing; Blackmagic Design support for input and preview monitoring; and resolution support to 4k.
