For those not following on Twitter, recently I picked up one of the new Dell XPS 7390 laptops for finally being able to deliver Linux benchmarks from Intel Ice Lake! Yes, it's real and running under Linux! For those eyeing the Dell XPS 7390 with this being the first prominent laptop with Ice Lake, here is a brief look at the initial experience with using Ubuntu 19.10.

The Dell XPS 7390 laptop that's being used for testing features the Intel Core i7 1065G7 processor, an Icelake quad-core processor with 1.3GHz base frequency and 3.9GHz peak turbo frequency. This Ice Lake processor features Gen11 Iris Plus Graphics, which we are eagerly testing with the latest Linux graphics drivers.
