- [Continuous endnotes in Writer](#) [2]

What you can see is that endnotes unconditionally start after the end of the document content in Word, while endnotes are unconditionally on separate endnote pages in Writer. The new ContinuousEndnotes layout compatibility flag in Writer allows rendering endnotes the Word way.

This new flag is enabled by default for DOC files, disabled otherwise.

All this is available in LibreOffice master (towards 6.4), so you can try it out right now, if interested.

- [\[LibreOffice\] AutoCorrect Dialog](#) [3]

In addition to an better placement the Word Completion Tab should be now easier to understood.
