Nextcloud is server-based free software all-in-one alternative to Google Drive with plugins capability that you can install to your server. It is very great, with it you can create file server for your office, with awesome additional plugins like LibreOffice Online ("Collabora") & Video Conference ("Talk") you can install as you wish. But if you do not have server to install it, where you can test out a Nextcloud service for free? There is a good news. Actually, Nextcloud Project already provides a gratis demo server at try.nextcloud.com everybody could use. By creating a free account, you can instantly test out Nextcloud with your friends. Enjoy!
