This is a weekly blog about the Raspberry Pi 4 (?RPI4?), the latest product in the popular Raspberry Pi range of computers.

This week?s blog focuses on an absolutely essential desktop activity. Surfing the web. A web browser is the quintessential desktop application. Everyone needs one, and there is not a desktop Linux distribution around that does not make a web browser available.

For Linux, there?s a web browser for every need. There?s heavyweight browsers jammed with a large feature set with addons and extensions. Then there?s leaner web browsers which still offer an attractive graphical interface. And there?s lightweight browsers including console based web browsers too.
