With the many Intel Ice Lake Linux benchmarks we began publishing over the past month since picking up a Dell XPS with Core i7-1065G7, there have been many benchmarks compared to the likes of the Core i7 Whiskey Lake and Kaby Lake processors. For those curious how the performance stacks up going further back, here are some Ubuntu 19.10 laptop benchmarks putting it up against the likes of Core i7 Haswell and Broadwell processors.

This article offers a look at the Ubuntu 19.10 + Linux 5.3 performance on six different laptops including the Dell XPS 7390 Ice Lake laptop and various other laptops I had available for testing.
