If you have used the Microsoft Edge web browser, classic or new, you may have stumbled upon the browser's Tab

Strip feature. Just click on the arrow icon on the tab bar to display thumbnail images of the sites and resources open in the browser.

It appears that Google is attempting to bring a similar feature to the company's Chrome web browser. Already in Chrome OS, Google engineers are working on introducing Tab Strip functionality in the Chrome browser.

The feature introduces an option in the Chrome browser to display a strip of tabs. While it is unclear yet how it would be activated by the user, it is likely that Google is adding an icon to the browser's tab bar to activate and deactivate the Tab Strip view in the browser.
