Do you think you can replace the whole user interface with Linux or any other platform? I hate to bust your bubble! But, the secondary OS stays inside an app and you get to stream it locally over VNC. The developer says nothing will stop someone from changing that.

Moreover, for those who look forward to getting GNOME, it hasn't been achieved yet. Despite trying, the person behind all these is facing a troubling bug in fontconfig and/or freetype. And, we will update this story if he comes up with a new progress in this affair.
