Today is the last day of the last month of this year if not decade. We're pleased to close this year with record traffic levels. In 2019 we increased our coverage of programming-centric matters, especially when the underlying frameworks/languages were Free/libre software.

Earlier this year we also celebrated our 15th anniversary. There are three of us working behind the scenes to make the site up to date and keep it up (online). We're all passionate users of GNU/Linux who want to spread the word and encourage more people to use the platform.

In 2019 not only did we see record traffic levels; we also saw an unprecedented level of success for GNU/Linux in the
adoption sense. Rianne is responsible for "Android leftovers" and remember that each Android device has Linux (or "Tux") in it. Google explored alternatives, but we haven't heard of these for months. It's nowadays very difficult to run a company or start a company without Linux -- no matter if in the server or device space. Let's hope Tux Machines will be around -- and online -- for many years to come. Happy new year.
