Opera Software kicked off 2020 with a new stable release of its cross-platform, Chromium-based Opera web browser for GNU/Linux, macOS, and Windows platforms.

Opera 66 has been released earlier this week as the latest and greatest version of this Chromium-based web browser, adding various enhancements to the user interface to make it easier for users to access sidebar extensions, as well as to help them more quickly reopen tabs that were closed by accident.

"We have an easy solution for this, one that doesn't require going to the full history section. When you click the clock icon that takes you to history, your browser will ask if you would like to reopen your recently closed tabs. If you click yes, they will come back as if you had never closed them in the first place," said Opera Software's Joanna Czajka.
