Arne Exton's exGENT GNU/Linux distribution aims to continue the tradition of Gentoo-based live distros with a new release that puts the latest LXQt 0.14.1 desktop environment in the spotlight.

We all know by now that Gentoo is one of the hardest Linux-based operating systems to install due to packages needing to be compiled from sources locally. But the good thing about Gentoo is that it doesn't use a one-size fits all

approach, which means that it can be fully optimized for specific hardware.

Newcomers who want to try Gentoo Linux on their personal computer have a hard time due to the lack of Gentoo-based live distributions. Here's where exGENT Linux comes into play, promising to offer users an up-to-date Gentoo-based live system that can be installed in a few minutes.
