Submitted by Rianne Schestowitz on Friday 31st of January 2020 05:23:00 PM Filed under [KDE](#) [1]

I am happy to announce we have released Qt 5.12.7 today.

The Qt 5.12 LTS is in 'strict' phase, so it will receive only the selected important bug and security fixes. This 7th patch release for Qt 5.12 LTS series contains almost 50 bug fixes including security issue fixes for both Qt (CVE-2020-0569 and CVE-2020-0570) and 3rd party components (CVE-2019-19244, CVE-2019-19603, CVE-2019-19242, CVE-2019-19645, CVE-2019-19646 & CVE-2019-19880). Also in QtWebEngine there are many CVE fixes from Chromium. Please check other most important changes from Qt 5.12.7 [Changes Files](#).

Qt 5.12.7 is now available via the maintenance tool of the online installer. For new installations, please download latest online installer from Qt Account portal or from [qt.io Download](#) page. Offline packages are available for commercial users in the Qt Account portal and at the [qt.io Download](#) page for open-source users. You can also try out the Commercial evaluation option from the [qt.io Download](#) page.
