[1]

This is the official release for Wayland 1.18. The main new features in this release are:

- Add support for the Meson build system (autotools is still supported but will be removed in a future release)
- Add API to tag proxy objects to allow applications and toolkits to share the same Wayland connection
- Track wayland-server timers in user-space to prevent creating too many FDs
- Add `wl_global_remove`, a new function to mitigate race conditions with globals

Thanks to all contributors!

There were no changes since RC1.

Simon Ser (1):

```
    build: bump to version 1.18.0 for the official release
```

```
git tag: 1.18.0
```
